MISSION ONE

Mission Report

Chief Mark

MISSION REPORT: CHIEF OFFICER MARK
DATE: 14/09/2187
PLANET: 034C (CODENAME: ABYSS)
SUBJECT: ENTRY AND CRASH INCIDENT; ENCOUNTER WITH UNKNOWN LIFEFORM

Objective:
The primary mission was to explore Planet 034c for potential resources and investigate anomalies detected in its atmosphere during long-range scans. The planet showed promising signs of mineral-rich terrain, essential for our colony's sustainability. Our starship, *Arcturus-17*, was assigned to lead the first detailed reconnaissance mission.

Entry Log:
We initiated atmospheric entry on 034c at 1600 Galactic Standard Time (GST). Initial readings from the scanners indicated heavy ionization in the planet's upper atmosphere, which we expected based on prior reports. However, halfway through descent, we detected irregular fluctuations in gravitational pull. Despite our attempts to adjust course, the gravitational field spiked erratically, locking us into a rapid, spiraling descent.

The ship's stabilizers began to overload due to the extreme conditions, rendering autopilot unresponsive. I ordered manual controls and shifted our trajectory to soften the landing, but the gravity spikes were too volatile. As we descended, a previously undetected electromagnetic wave hit our systems, causing a total shutdown of the ship's primary power core. All comms and navigational systems failed.

At 1615 GST, we made a forced landing on the surface. It wasn't a crash landing per se—at least, not in the conventional sense. The ship came down hard, but the terrain absorbed most of the impact, though the ship sustained critical damage to its thrusters and life support systems.

Crash Site Conditions:
Upon exiting the vessel, we found ourselves in a dense, fog-like environment. The terrain was unlike anything documented. The soil was covered with luminescent particles, which appeared to be organic, and the air, though breathable, was thick with unknown compounds.

Despite the seemingly barren nature of the planet, the fog began to shift unnaturally, almost as if it were alive, forming patterns that followed our movement. I ordered my team to proceed with caution. We set up a temporary base 300 meters from the ship while assessing the damage.

First Contact:
While securing the perimeter, our sensors picked up motion on the outskirts of our camp. At 1730 GST, we encountered a lifeform unlike any we've seen—humanoid in shape but composed of shifting, semi-transparent material. It moved silently, and though it did not appear hostile, its presence was unsettling.

The being communicated not through sound, but through a series of pulsating light patterns across its body. At first, we couldn't comprehend its intentions, but it seemed to be mimicking our movements, perhaps analyzing us.

Analysis of the Lifeform (Codename: Kamira):
Our preliminary scans indicated that this lifeform was composed of both organic and energetic components. It appeared to be in a constant state of flux, as if it existed between physical and energetic dimensions. We have named it "Kamira," after the ancient mythological beings said to be guardians of unknown worlds.

The Kamira lifeform showed no immediate signs of aggression. Instead, it began interacting with our ship's wreckage, seemingly analyzing our technology. I believe they may have advanced cognitive abilities, as their actions seemed purposeful. At one point, the Kamira interacted with our malfunctioning systems, causing a temporary power surge that restored minor functions to our vessel.

Conclusion:
The crash landing has left our ship immobile and unable to return to orbit. However, the presence of the Kamira introduces new variables into the mission. These beings are advanced, though their intentions remain unclear. Whether they are a threat or potential allies is still to be determined. We are currently assessing the potential for communication with the Kamira, as their capabilities suggest a far greater understanding of energy manipulation than we initially assumed.

Immediate action is required to initiate repairs on the *Arcturus-17* and establish stable contact with Command. We will continue to document our interactions with the Kamira and monitor any further anomalies in the planet's gravitational and electromagnetic fields.

OFFICIAL REPORT
WANA HEALTH & LIFE (WHL) - PUBLIC AFFAIRS DIVISION
SUBJECT: STATUS UPDATE ON MISSION TO PLANET 034C
DATE: 21/09/2187

To the Concerned Public, Partners, and Galactic Colonies:
Wana Health & Life (WHL) is issuing this official statement to clarify recent rumors and misinformation circulating about our recent exploratory mission to Planet 034c, codenamed "Abyss." We understand that speculation has emerged regarding alleged encounters with extraterrestrial lifeforms and unverified DNA discoveries. We want to emphasize the importance of relying on official WHL communications for accurate information and to avoid the spread of baseless claims.

Mission Overview
Our mission to Planet 034c was initiated to conduct a standard resource reconnaissance. The objectives were clear: identify mineral deposits and assess the viability of the planet for future energy harvesting. Unfortunately, during the course of this routine mission, the Arcturus-17 experienced a minor technical issue leading to a temporary loss of communication with our station. Contrary to rumors, this was purely a mechanical fault within the ship's communication array, exacerbated by the planet's high levels of atmospheric ionization. WHL's internal technical team has thoroughly investigated the matter and found no evidence of external interference or abnormalities during the mission. The situation was brought under control shortly after landing, and connection with the station was re-established within the expected timeframe.

Alleged Discovery of Lifeforms
Some speculative reports have mentioned that the crew of the Arcturus-17 encountered an unknown lifeform while on the surface of 034c. We would like to categorically state that no evidence supports these claims. Our mission's debriefing and internal review have found that the environmental readings on the planet did not indicate the presence of any lifeforms, humanoid or otherwise.

Planet 034c has been surveyed by multiple organizations over the last decade, and no findings of indigenous species have ever been reported. The notion of "humanoid" beings composed of shifting energy is purely fictional and has no basis in the data collected by WHL or any prior exploration teams.

Unfounded Claims Regarding DNA Analysis
It has also come to our attention that there are unsubstantiated rumors regarding the discovery of a non-human DNA structure linked to the mission. These rumors are completely false. The only biological samples retrieved were trace amounts of bacterial microorganisms, consistent with environments rich in mineral deposits, which is the primary focus of our research.
There is no "un-human DNA" to report, nor were there any significant biological discoveries made on 034c. These allegations appear to have originated from unofficial sources and misunderstandings surrounding routine sampling operations.

Conclusion
Wana Health & Life (WHL) remains committed to transparency and accuracy in all of its research and exploration missions. We assure you that there is no cause for alarm, and any suggestion of a cover-up or discovery of alien life is simply not grounded in reality. The mission to Planet 034c is proceeding as planned, and we are currently preparing a full report on the planet's resource potential, which will be made available to the public in due course.
We urge the public to disregard these unfounded rumors and trust WHL to continue delivering responsible and factual updates. Any further inquiries can be directed to our Public Affairs office.
Thank you for your understanding and support.
